### Botanical surveys

Our company specialises in carrying out botanical surveys. This may include surveys of upland habitats for wind farms, habitat restoration for road schemes, the renewal of mineral permissions for quarries and vegetation monitoring for pipelines.

### Extended Phase 1 Habitat Survey

- Usually the first survey to be carried out.
- Includes a desktop study and data trawl.
- Site survey and habitat plan.
- Assessment for impact on protected species.
- Recommendations for further surveys.

### Great crested newt surveys

GCN surveys make up a large proportion of our annual workload. We can carry out the surveys for you, apply for a development licence and provide an Ecological Clerk of Works for the duration of the project. GCN surveys can only be carried out between the middle of March and mid June.
